New Features Give More Flexibility in the Use of Contemporary Controls' BAS Remote I/O Master

Downers Grove, IL (January 26, 2009) — Contemporary Controls is providing more flexibility for their customers by developing three new features incorporated in the company's BAS Remote I/O Master. The three features are Change of Value (COV), Read Property Multiple (RPM), and Foreign Device Registration (FDR)—which collectively allow for more flexibility in the use of the product.

COV provides updates without the need to poll variables. **RPM** allows for more efficiency in the product's communications. **FDR** allows this device to work with IP routers through BACnet[®]/IP Broadcast Management Devices (BBMDs).

Sales Manager Joe Stasiek says these features are ideal for use in more complex or advanced networks.

For full details, please contact Sales Manager Joe Stasiek at (630) 963-7070 x 116 or jstasiek@ccontrols.com.
